SUMMARY

Site Reliability Engineer with 6+ years of AWS production experience, owning reliability across 4+ environments supporting approximately 60 services, 500+ ML training runs/month, and 100+ monthly deployments while leading 4-5 engineers. Strong in SLI/SLO-driven reliability, incident response/RCA, AWS networking, observability, CI/CD, security hardening, BCP/DR, SageMaker, Temporal, AWS Batch, Lambda, and engineering automation.

SKILLS

AWS & Platform	EC2, ECS, ECR, VPC, ALB, S3, RDS, DynamoDB, IAM, Route 53, Lambda, AWS Batch, SageMaker, Bedrock, AgentCore, CloudWatch, AWS Client VPN
SRE & Observability	SLI/SLO/SLA, Incident Response, On-Call, RCA/Postmortems, Runbooks, MTTR, BCP/DR, ELK, Datadog, Site24x7, Nagios
Containers & IaC	Docker, Kubernetes, ECS, CloudFormation, Terraform, Ansible, Linux
CI/CD & Automation	Jenkins, GitHub Actions, Maven, Temporal, Parameterized/Scheduled Jobs, Python, Bash
Security & Data	Entra ID/Azure AD, SSO, Duo MFA, Conditional Access, Least-Privilege IAM, TLS, Vulnerability Management, PostgreSQL, MongoDB

EXPERIENCE

Site Reliability Engineer Apr 2024 - Present
DATAPOEM Bengaluru, India

- Own reliability across **4+ AWS environments/~60 services** and lead **4-5 engineers** across requirements, technical planning, delivery, mentoring, performance reviews, hiring, blocker removal, and hands-on troubleshooting.
- Own service-specific SLI/SLO monitoring and serve as primary escalation point for critical production incidents, including off-hours escalations; managed **70+ incidents**/escalations and contributed to **~60% lower MTTR** through RCA, observability, runbooks, and process improvements.
- Operate **500+ ML training runs/month** across CPU/GPU workloads; GPU training runs on Amazon SageMaker, peak overall training concurrency reaches ~10-15, and individual runs range from **~6-8 hours to 4 days**.
- Implemented Temporal for durable workflow orchestration, retries, and failure recovery; operate AWS Batch for CPU-based asynchronous workloads with **~20-30 concurrent task jobs** at peak.
- Support **100+ ECS/EC2 deployments/month** using Jenkins and GitHub Actions; maintain parameterized/scheduled pipelines, Lambda-based operational guardrails, and secure Docker multi-stage/non-root builds.
- Implemented AWS Client VPN with Microsoft Entra ID SSO, moving **~20 internal applications** from public access to VPN/private connectivity while hardening VPC routing, Security Groups, load balancing, DNS, IAM, and TLS controls.
- Operated ELK and Site24x7 for logs and infrastructure monitoring; separately built an AI-agent log-analysis tool for API-failure notifications and a RAG system for identifying recurring patterns from historical incidents.
- Built an AI-assisted security/code-quality platform covering **~50-60 GitHub repositories**; integrated High/Critical release gates with GitHub Actions/CI/CD and automated API documentation.
- Developed an AI-assisted PostgreSQL/MongoDB comparison and replication platform across 5 environments for fast data/schema validation and controlled database, table, and collection mirroring.
- Reduced AWS infrastructure **costs by ~30-40%** through rightsizing, cleanup, lifecycle controls, and workload optimization; negotiated ~15% overall AWS commercial discount and support BCP/DR, security, identity/SSO, and compliance activities.

Independent Cloud & DevOps Consultant Apr 2023 - Mar 2024
FREELANCE

- Delivered cloud hosting, deployment architecture, application/tool configuration, troubleshooting, and production support for websites and applications from requirements through operational handover.

Senior Infrastructure Developer Jan 2022 - Mar 2023
COGNIZANT

- Standardized AMI/Docker pipelines, reducing environment drift/infrastructure issues by ~40%; automated vulnerability remediation and improved CI/CD reliability/deployment timelines by ~30%.
- Maintained shared production infrastructure focused on availability, security, compliance, and operational consistency; received the Member of Sprint award twice.

DevOps Engineer May 2020 - Dec 2021
IBM

- Automated AWS provisioning with Ansible (~50% faster setup) and built Jenkins/Maven CI/CD pipelines that increased release frequency by ~35%.
- Implemented Nagios monitoring supporting 99.9% uptime and supported Docker/Kubernetes-based workloads.
