SUMMARY

Site Reliability Engineer with 6+ years of AWS production experience across reliability, incident response, ML platforms, secure delivery, and cloud automation. Own reliability across 4+ environments supporting approximately 60 services, provide technical leadership to 4–5 engineers, and operate platforms handling 500+ ML training runs and 100+ deployments per month.

CORE SKILLS

AWS & Platform: EC2, ECS, ECR, VPC, ALB, S3, RDS, DynamoDB, IAM, Route 53, Lambda, AWS Batch, SageMaker, Bedrock, CloudWatch, AWS Client VPN

SRE & Observability: SLI/SLO/SLA, incident response, on-call escalation, RCA, postmortems, runbooks, MTTR, BCP/DR, ELK, Datadog, Site24x7, Nagios

Containers & IaC: Docker, Kubernetes, CloudFormation, Terraform, Ansible, Linux

CI/CD & Automation: Jenkins, GitHub Actions, Maven, Temporal, Python, Bash, secure container builds, release engineering

Security & Data: Entra ID SSO, Duo MFA, least-privilege IAM, TLS, vulnerability management, PostgreSQL, MongoDB

EXPERIENCE

Site Reliability Engineer | DataPoem | Bengaluru, India | Apr 2024–Present

- Own reliability across 4+ AWS environments and approximately 60 services while providing technical leadership to 4–5 engineers across planning, delivery, mentoring, and hands-on troubleshooting.
- Own service-specific SLI/SLO monitoring and primary escalation for critical production incidents; handled 70+ incidents/escalations and contributed to approximately 60% lower MTTR through RCA, observability, runbooks, and process improvements.
- Operate 500+ monthly CPU/GPU ML training runs using SageMaker, Temporal, and AWS Batch, with durable orchestration, automated retries, and peak concurrency of approximately 10–15 training runs and 20–30 Batch jobs.
- Support 100+ ECS/EC2 deployments per month using Jenkins and GitHub Actions; maintain parameterized pipelines, Lambda guardrails, and secure multi-stage, non-root container builds.
- Implemented AWS Client VPN with Entra ID SSO, moving approximately 20 internal applications from public access to private connectivity; contributed to 30–40% lower AWS infrastructure cost through rightsizing, cleanup, lifecycle controls, and workload optimization.
- Built internal AI-assisted tools for log analysis and historical-incident retrieval; delivered High/Critical CI gates across approximately 50–60 repositories and PostgreSQL/MongoDB comparison and controlled-mirroring workflows across five environments.

Independent Cloud & DevOps Consultant | Freelance | Apr 2023–Mar 2024

- Delivered cloud hosting, deployment architecture, application and infrastructure configuration, troubleshooting, production support, and operational handover for confidential client applications.

Senior Infrastructure Developer | Cognizant | Jan 2022–Mar 2023

- Maintained shared production infrastructure focused on availability, security, compliance, and operational consistency; standardized AMI and Docker image pipelines, reducing environment drift by approximately 40%.
- Automated vulnerability remediation and improved deployment consistency; received the Member of Sprint award twice.

DevOps Engineer | IBM | May 2020–Dec 2021

- Automated AWS provisioning with Ansible, reducing setup time by approximately 50%, and built Jenkins/Maven pipelines that increased release frequency by approximately 35%.
- Implemented Nagios monitoring for systems operating at 99.9% uptime and supported Docker/Kubernetes workloads.
